Power Reliability

The proliferation of digital equipment in processing facilities, on-line commercial transactions, data centers, and distributed telephony and cable and satellite infrastructure is among the reasons that demand for high quality, uninterruptible power systems continues to rise. This investment area explores technologies that help small and large customers protect sensitive production equipment from power interruption and failure.

Pentadyne designs, manufactures and markets advanced flywheel power systems that provide power quality and reliability solutions for power sensitive commercial and industrial customers in today's growing digital economy. The Pentadyne flywheel provides high power ride-through energy storage and differentiates itself on superior product performance and lower life-cycle costs. Pentadyne serves broad markets through strategic alliances with established OEM and value-added reseller distribution channels.
